

Now of course the obvious retort is, 'Why would you compare yourself to 2009, a terrible year? If we are not doing better than 2009, then we have a real problem,'" says Jan Freitag.

"So then you can look at the actual achieved occupancy year to date. In August 2008 it was 62.6 percent; in August 2010 it was 58.8 percent. So there's still a very huge gap between the number of rooms sold then than now, not compared to 2009 but to 2008. That's really the bellwether." In 2007, when hospitality was booming, occupancy measured 64.7 percent, which is six points higher than current levels. "That's a lot," says Freitag, "and we are not going to be able to make that up in a year or so."

Using August 2010 as a benchmark for hotel data in Minnesota, RevPAR was up 5 percent over the same eight-month period in 2009, out-

pacing neighboring states of South Dakota, which increased 2.9 percent; Iowa, up 4.5 percent; Kansas, relatively flat with a 1 percent gain; and Nebraska, whose hotels achieved a RevPAR increase of only 3.6 percent. Only North Dakota fared better with an 11 percent increase, attributable by many to be an increase in the state's burgeoning oil industry.

Evidence of a sluggish recovery can be found in measures from the Bureau of Economic Analysis. Real GDP grew during the first three quarters of 2010: 3.7 percent, 1.7 percent and 2 percent respectively. Real spending on travel and tourism increased at an annual rate of 5 percent during the first quarter of 2010, followed by an increase of 2 percent during the second quarter.

Nonetheless, while travel in the United States began to rebound in 2010 the gains were not enough to offset 2009 declines, according to measures from the U.S. Travel Association, *Outlook Forum 2010*. In 2010, domestic leisure travel volume regained the 2.3 percent drop from the previous year to remain at 2008 levels. But business travel, while increasing in 2010, still remains nearly 2 percent below 2008 levels, according to U.S. Travel and Travel Economics

"What the data is showing is that business volume is up this year, but the revenue is not. And it hangs by a thread."

—Henry Harteveldt, Forrester Research

data. Consumer confidence and corporate uncertainty about the economy has slowed travel's recovery.

This lack of confidence in the overall economy appears in many industry surveys. In July 2010 interest in travel as well as money available for leisure travel in the next six months dropped to its lowest point in the post recession recovery since October 2008, according to U.S. Travel data. Nonetheless, the affordability of travel during the same timeframe was at all-time highs. It's a dichotomy, or perhaps a function of just how price is able to lure customers to the market, in that during the same month of July, with sentiment at its lowest, Smith Travel Research discovered that American hotels sold the most rooms

than in any month ever recorded: 102 million. "So, recession or no recession, that is a very strong number," says Freitag. "Something is obviously going right."

Evidence suggests that the affordability of travel at the moment is keeping much of the leisure travel in place. During the first seven months of 2010, 33.8 million international visitors traveled to the United States, according to data from the U.S. Department of Commerce, a 12 percent increase over 2009, and during their stays international visitors spent \$76.7 billion, 10 percent more than the same time period the year before. July 2010 marked the 10th consecutive month of increases in U.S. arrivals. As a beleaguered U.S. economy kept travel prices low, international travelers took advantage of perceived bargains. An interesting correlation shows that accommodation rates, along with favorable exchange rates, topped the list of moti-

vators for travel to the United States, according to the Commerce Department's International Trade Administration.

Frugality and value are the watchwords for the travel industry in the coming months, says

Henry Harteveldt, vice president and principal analyst at Forrester Research. Travel is a discretionary activity, says Harteveldt; it's a function of consumer confidence. "During one of the worst months of unemployment numbers you saw consumers come out a buy things such as the iPad in large numbers," he says. "It shows that consumers are choosing to spend their money where they see value."

Ingrid Schneider, director of the University of Minnesota Tourism Center, says 2010 will go down as a year of challenges. "I think that no matter what market you are serving there needs to be a continued focus on the basics," she says. "I think people will be seeking value, but they will also be doing comparisons. So

if there is a value to be had, but your customer service is wanting, that will really be the key differentiator."

While many analysts see signs of steady recovery for the leisure travel market, many doubts remain about the state of business travel for 2011, especially since stringent ROI measures are now in place for many corporations and associations. "What the data is showing is that business volume is up this year, but the revenue is not," says Harteveldt. "And it hangs by a thread. One bad quarter and CEOs could get scared again and cut back on business travel once again."

A small majority of senior travel executives believes that meetings have not yet returned to pre-recession levels (51 percent) according to IMEX America *Index of Optimism* survey data released in late October. A strong majority of senior executives (70 percent) believes that demand for meetings is growing again, yet 47 percent of respondents say events are not yet increasing in size, duration or spending per delegate. What is increasing however, according to the IMEX America survey data, is the importance of demonstrating improved ROI (83 percent). A large majority of meeting planners (71 percent) feel more optimistic now than they did during the first quarter of 2010, according to another study conducted by IMEX: *Global Insights November 2010*.

Rising costs, along with short lead times, remain top concerns for meeting planners, according to MPI's Business Barometer, October 2010. Market pressures are pushing the costs up, even during a tepid recovery, as many hoteliers, airlines and restaurants slashed prices to stay competitive. As more travelers re-enter the market, planners may see a buyer's market begin to turn in the other direction, according to analysis from the National Business Travel Association (NBTA) in its latest report *2010 Industry Pulse: Business Travelers Buyers' Sentiment*. In the report, NBTA predicts that, once tal-

ied, domestic airfares will increase by 4.17 percent in 2010, and will rise by another 4.48 percent in 2011. While remaining flat in 2010, hotel prices are predicted to rise nearly 3 percent in 2011. For planners, increased hotel rates may just mean higher expenses, but for the hotelier it's a sign of hospitality industry recovery.

"Yes, hotels are eager to raise rates," says STR's Freitag. "I hope [rate growth] is going to be faster. I think our data shows that it could happen faster. When the rates fell in 2001, it took 41 months to recover. But this time rates fell almost \$11, and we are 23 months into it. And if you look at that trajectory, I'm not sure when that's going to turn around. Obviously it will; we are already seeing some months of solid ADR." At the current pace, the market would still require 25 more months before rates would

reach their peak once again. "That's four years," says Freitag.

In the Twin Cities, demand for hotels declined by 9.6 percent during the first eight months of 2009, says Freitag. But during the same time period during 2010, demand increased 9.9 percent. "The room demand slump that we observed in 2009 is basically wiped out," says Freitag. "I think any number above 5 million rooms is a good number for the Twin Cities, and now you're back up to 5.6 million. That's good." Coupled with a negligible growth in room supply, Twin Cities occupancy

and hotel rates could soon beat national growth rates.

So far, consumers at the upper end of the market have led hospitality recovery. The luxury hotel segment was the only market that saw its average daily rate (ADR) grow in 2010, according to STR data. "Yes the middle part of the market is going to recover," says Freitag, "but not until mid-2011."

In a survey conducted over the summer, USTA and Ypartnership discovered those planning to take a leisure trip between August 2010 and January 2011 varied according to household income. Of those households earning between \$30,000 and \$49,999, 46 percent had planned to take a trip, while nearly three-quarters of households earning more than \$100,000 had a leisure trip in the works. The survey corresponds with lodging statistics. RevPAR figures rose more than 4 percent at luxury

hotels and 3 percent at upscale locations during the first eight months of 2010, while every other category remained flat.

"We are seeing that the upper end of the market has recovered very, very well. Those who are well off said: I still want to go on vacation," says Freitag. "And those who aren't well off said: At least I have a job. The unemployment rate is stagnant at 10 percent, which is a very high number for the United States. I'm from Germany and we've had 10 percent unemployment since unification in 1989. You just take it as part of the economic fabric and move on. So I think that as people get used to double-digit or high single-digit unemployment and realize that they still have a job, they will probably feel that this is a kind of new normal, for lack of a better phrase. And they will begin to think they can still go on vacation."

Upper-income travelers have also led the past year's market recovery in air travel. The

Getting Back to Business

(VENDOR)
In the coming year (2011), I predict my company's revenue will:

FROM OUR SURVEY:

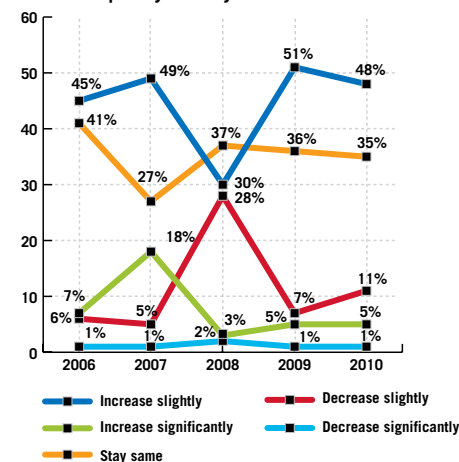

Coming out of the economic times we have been in for the past 18 months, companies are still cutting budgets and payroll. This in turn is slowing the meetings and events side of things. I think as we start to see things improving, we will start getting this business back. The question is will companies start to spend again like in the past or is this a new attitude going forward to spend less and do less?

Hotel Occupancy Recovery

Hotel Rates

continued from page 37 >

International Air Transport Association reports the number of passengers traveling in business and first class increased 9 percent in the first nine months of 2010, but nearly all of the increases happened during the first quarter. Like all economic activity, growth has leveled during the subsequent quarters. Nevertheless, some larger airlines have already begun to respond to changing market conditions.

For nearly three years, the major airlines have shed capacity in response to high fuel prices and the beleaguered economy. Only recently, in response to signs early last year of a rise in business travel in particular, have airlines begun to add capacity. In November 2010, 10 of the largest U.S. airlines scheduled

2.7 percent more seats than the same month the year before; Delta Air Lines added 9.5 percent more seat miles. The number of average daily seats on domestic departures in November 2010 at MSP International was up 2.4 percent from November 2009, according to *USA Today's* analysis of figures provided by the Official Airline Guide.

Yet many analysts believe that an increase in the cost of travel could come at a bad time for the industry. Citing a study from American Express, which predicts that business travel expenses could increase between 2 percent and 10 percent in 2011, Harteveltdt foresees many changes in business travel on the horizon, including an increase in the number of smaller, regional events, he says. "You won't see the big conferences in the big cities, but instead you might have regional

conferences, particularly in the Northeast and the Midwest," he says. "It could be an opportunity for department managers, where it is easier to cover from a department level—more conferences at a hotel, perhaps, but without overnight stays."

Harteveltdt also sees an industry that will increasingly adapt to wider use of new technologies, for good or ill. Not only will he be watching whether airlines and hotels will be able to raise their rates above inflation as one sign of recovery, he will also be looking at key technological developments. "Will Cisco continue to sell their HD telepresence technologies to area hotels that area corporations can rent to host meetings?" he asks. "How many of them will they sell?"

In July 2009, 35 percent of adults in the United States traveled for business, according

to a survey by U.S. Travel and Ypartnership. In July 2010, that number was down to just 23 percent, with only 16 percent of business-ess looking to increase their business travel intentions, a statistic that has remained flat over the association's past four surveys.

It's this softness in the business travel market that has many analysts believing that leisure travelers will lead any recovery. "Leisure will drive the market," says Harteveltdt. "Demographics are our destiny. The younger people view technology as an enabler and a way to reduce business travel. Individuals in the industry must be aware of these changes and begin to learn to cater to the leisure traveler. That's why I've been stressing that the leisure market will come to be a more important part of the industry.

"Many in the industry—hoteliers, CVBs and the like—will need to reevaluate what the meetings industry will look like," says Harteveltdt. "I honestly wonder whether many convention centers will actually take a look at their real estate and wonder, 'How much space do I need to tear down?' I see that happening in the next five to 10 years."

What new technology and teleconferencing have done is to make those "borderline" trips unnecessary, says Harteveltdt. "That's good or bad news but you cannot do business without taking trips. Business travel just isn't fun anymore; 40 percent of leisure travelers bring a laptop on vacation with them. Virtual meetings are not as good as being there. They are good for maintaining relationships, but not for finding new business and developing new relationships. [Nonetheless] half of business travel buyers will have a policy this year to have teleconferencing in place."

Hospitality professionals regrouped to find their footing in 2010, but the coming years may not bring the kind of rapid recovery typical of recent business cycles. "I don't think 2011 is going to be any different," says Schneider. "I think we are looking at more of the same and the successful enterprise will be one that is innovative and attentive to new markets and marketing opportunities, that doesn't lose that important foundation of service, of responsiveness, of informed targeted marketing." ■

STATE OF THE INDUSTRY METHODOLOGY

The seventh annual *Meetings: Minnesota's Hospitality Journal* Industry Survey was posted on www.mn-meetings.com between July and October 2010. Respondents could opt into one of the versions of the survey: the first designed for general meeting planners and the second designed for vendors/suppliers to the industry. Response was driven by mailings to 5,600 randomly selected industry professionals, upon which 133 usable surveys were received (91 planner surveys, 42 vendor/supplier surveys). Survey participants could opt in and be eligible to win one of four \$100 gift certificates to Crave, Mission or Pazzaluna. The editors would like to thank everyone who took the time to participate in this year's survey. Your insight and knowledge allow us to bring you the best possible coverage of the state's hospitality industry.
